IN THE CLAIMS:

Please amend the claims as follows.

1. (Currently amended) A method for testing a plurality of computing products, the method comprising:

providing a central repository including data structures, said data structures comprising platforms, test suites, an execution test harness, and an installer;

downloading said installer to a plurality of clients of said central repository; ~~and~~

responsively to an execution of said installer in said clients, downloading and installing from said central repository selected ones of said platforms and said test suites to said clients for use by said clients in testing said computing products;

providing a platform editor for making a modification of at least one of said platforms, said test suites, and said execution test harness of said central repository, wherein said modification is automatically applied to all of said clients that are using said at least one of said platforms, said test suites, and said execution test harness.

2. (Cancelled)

3. (Previously presented) The method according to claim 1, wherein said execution test harness is executed by said clients using binary files thereof residing on said central repository.

4. (Original) The method according to claim 1, wherein different selected ones of said platforms and said test suites are installed on different ones of said clients.

5. (Original) The method according to claim 4, wherein said different ones of said clients execute said test suites concurrently.

6. (Original) The method according to claim 4, wherein said different ones of said clients execute said test suites at different times.

7. (Currently amended) A computer software product, comprising a computer-readable storage medium in which computer program instructions are stored, which instructions, when read by a computer, cause the computer to perform a method for testing a plurality of computing products, comprising:

defining a central repository including data structures, said data structures comprising platforms, test suites, an execution test harness, and an installer;

downloading said installer to a plurality of clients of said central repository; ~~and~~

responsively to an execution of a script generated by said installer in said clients, downloading selected ones of said platforms and said test suites to said clients for use by said clients in testing said computing products under control of said execution test harness;

defining a platform editor for modifying at least one of said platforms, said test suites, and said execution test harness of said central repository.

8. (Cancelled)

9. (Previously presented) The computer software product according to claim 7, wherein said execution test harness is executed by said clients using binary files thereof residing on said central repository.

10. (Original) The computer software product according to claim 7, wherein different selected ones of said platforms and said test suites are installed on different ones of said clients.

11. (Original) The computer software product according to claim 10, wherein said different ones of said clients execute said test suites concurrently.

12. (Original) The computer software product according to claim 10, wherein said different ones of said clients execute said test suites at different times.

13. (Currently amended) A test execution system for testing a plurality of computing products, comprising:

a central repository including data structures, said data structures comprising platforms, test suites, and an execution test harness; ~~and~~

an installer for downloading and installing selected ones of said platforms and said test suites at a plurality of clients of said central repository; and

a platform editor for modifying at least one of said platforms, said test suites, and said execution test harness of said central repository.

14. (Cancelled)

15. (Original) The test execution system according to claim 13, wherein clients of said central repository execute said execution test harness using binary files residing on said central repository.

16. (Original) The test execution system according to claim 13, wherein different selected ones of said platforms and said test suites are installed on different ones of said clients.

17. (Original) The test execution system according to claim 16, wherein said different ones of said clients execute said test suites concurrently.

18. (Original) The test execution system according to claim 16, wherein said different ones of said clients execute said test suites at different times.

19. (Previously presented) A method for testing a plurality of computing products, the method comprising:

providing a central repository including data structures, said data structures comprising platforms, test suites, an execution test harness, and an installer;

downloading said installer to a plurality of clients of said central repository;

responsively to an execution of a script generated by said installer in said clients, downloading selected ones of said platforms and said test suites to said clients for use by said clients in testing said computing products under control of said execution test harness; and

defining a platform editor for modifying at least one of said platforms, said test suites, and said execution test harness of said central repository.

20. (Previously presented) The method according to claim 19, wherein said execution test harness is executed by said clients using binary files thereof residing on said central repository.

21. (Original) The method according to claim 19, wherein different selected ones of said platforms and said test suites are installed on different ones of said clients.

22. (Original) The method according to claim 21, wherein said different ones of said clients execute said test suites concurrently.

23. (Original) The method according to claim 21, wherein said different ones of said clients execute said test suites at different times.

24. (Currently amended) A computer software product, comprising a computer-readable storage medium in which computer program instructions are stored, which instructions, when read by a computer, cause the computer to perform a method for testing a plurality of computing products, comprising ~~the steps of~~:

defining a central repository including data structures, said data structures comprising platforms, test suites, an execution test harness, and an installer;

downloading said installer to a plurality of clients of said central repository;

responsively to an execution of a script generated by said installer in said clients, downloading selected ones of said platforms and said test suites to said clients for use by said clients in testing said computing products under control of said execution test harness; and

defining a platform editor for modifying at least one of said platforms, said test suites, and said execution test harness of said central repository.

25. (Previously presented) The computer software product according to claim 24, wherein said execution test harness is executed by said clients using binary files thereof residing on said central repository.

26. (Original) The computer software product according to claim 24, wherein different selected ones of said platforms and said test suites are installed on different ones of said clients.

27. (Original) The computer software product according to claim 26, wherein said different ones of said clients execute said test suites concurrently.

28. (Original) The computer software product according to claim 26, wherein said different ones of said clients execute said test suites at different times.

29-33. (Cancelled)
